

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

cussion of relationships and nomenclature, and incidentally comment is made upon various species from other parts of South and Central America. Five new forms are described from Surinam and thirteen from other places — Panama, Mexico, St. Vincent, Trinidad, etc., while two new genera are erected; *Helicolestes* for *Falco hamatus*, and *Hypocnemoides* for *Hypocnemis melanopogon*. Thirteen names not in current use have been revived and recognized.

The paper is a valuable contribution to the ornithology of a region upon which comparatively little has been written in late years.— W. S.

Riley on a New Bullfinch from China.¹— A single specimen of a Bullfinch from Peking recently presented by Mr. Geo. D. Wilder to the U. S. National Museum proves to belong to an undescribed race allied to *Pyrrhula erythraca* from Sikhim but widely separated geographically. Mr. Riley names it in honor of its discoverer, *P. e. wilderi*.— W. S.

McGregor on New or Noteworthy Philippine Birds.²— This contribution consists of notes on twenty-two species of birds Philippine, including an additional record of the Monkey-eating Eagle, *Pitheophaga jeffreyi*, an account of a living specimen of *Leucotreron merrilli* with a colored plate. For this species the new subgeneric name *Neoleucotreron*, (p. 2) is proposed. The other notes deal mainly with terns, shore-birds and swifts.— W. S.

Gabrielson on the Birds of Clay and O'Brien Counties, Iowa.³— This list of 136 species is the result of a number of field trips during several years prior to 1912. It is not presented with any idea of its being complete but mainly because conditions in the last few years have so altered the region that any record becomes of great interest. Extensive draining, the author tells us has destroyed almost all the swamps and ponds, and he goes on to say: "Where in 1909 and 1910 cat tails and other aquatic vegetation, teeming with bird life, flourished, solid fields of corn now stand and the birds have vanished." Unfortunately this is not the only spot where such changes are going on and he who saves for posterity some record of the original faunal conditions deserves the highest commendation.— W. S.

Recent Papers on Bird Preservation.— The Annual Report of the State Ornithologist of Massachusetts⁴ is as usual full of interesting matter to the conservationist. We learn with regret of the depletion of the Heath
